Maximum Marks	4 Marks

Empathy Map

Mythri is a college student who identified a real problem faced by students during exam preparation the inability to process large volumes of study material efficiently. As both the user and developer of StudyAI, she experienced firsthand how time consuming it is to manually create summaries, flashcards, and practice questions from textbooks and lecture notes. This empathy map captures her perspective as a student user, highlighting the frustrations, behaviors, and motivations that drove the design of StudyAI. It automatically generate summaries, flashcards, quizzes, weak topic analysis, and personalized study schedules from any uploaded study material

SAYS	THINKS
"I don't have time to read everything before the exam." "I wish someone could summarize my notes for me." "Making flashcards takes too long." "I never know which topics to focus on."	- Worries about covering all topics before exams. - Thinks AI could help study smarter and faster. - Feels uncertain about whether she is studying the right things. - Believes smart studying is better than hard studying.
Mythri Sarla <i>AI/ML Developer & Project Lead</i>	
DOES	FEELS
- Highlights text in PDFs hoping to remember it. - Makes last-minute notes from large textbooks - Watches YouTube videos for quick topic summaries. - Takes practice tests from old exam papers.	- Overwhelmed by the volume of content to cover. - Anxious about exam performance and grades. - Frustrated when study methods don't seem to work. - Motivated when she sees measurable progress.
