

Coding & Solution

Date	10 july 2026
Team ID	
Project Name	StudyAI-Smart AI educate Companion&Quiz Generator
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/MythriSarla/studyai
Programming Language(s)	JavaScript (React), Python
Framework(s) Used	React (Vite), Flask
Key Features Implemented	User authentication (Firebase), file upload & parsing (PDF/DOCX/TXT), AI generated summaries/flashcards/quizzes (Groq API), quiz scoring, analytics dashboard (Chart.js)
Pending / Incomplete Features	Streaks/reminder notifications, multi-language support (future scope)
Setup / Run Instructions	Clone repo → install frontend deps (npm install in client folder, npm run dev) → install backend deps (pip install -r requirements.txt) → set environment variables (Groq API key, Firebase config) → run backend (python app.py or gunicorn app:app)

Code Quality Checklist

S.N	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a clean separation between frontend and backend, with the AI generation logic isolated into its own module for easy maintenance and future model swaps.
