

Project Executable Files

Date	10 july 2026
Team ID	
Project Name	StudyAI-Smart AI educate Companion&Quiz Generator
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

/studyai (project root)
├── /frontend
│   ├── /src
│   │   ├── /components      - Reusable UI components (Navbar)
│   │   ├── /pages           - Login, Signup, Dashboard, Upload, Analytics
│   │   ├── /context         - AuthContext for global state management
│   │   ├── /services        - Axios API service with interceptors
│   │   └── App.jsx          - React Router configuration
│   ├── package.json         - Node.js dependencies
│   └── vite.config.js       - Vite build configuration
├── /backend
│   ├── /app
│   │   ├── /controllers     - Auth and Upload business logic
│   │   ├── /routes          - Flask Blueprint URL definitions
│   │   ├── /services        - Groq AI service
│   │   ├── /prompts         - AI prompt templates
│   │   ├── /utils           - File parser utilities (PDF, DOCX, TXT)
│   │   └── /config          - Firebase configuration
│   ├── requirements.txt     - Python dependencies
│   ├── run.py              - Flask app entry point
│   ├── Procfile            - Gunicorn production server config
│   └── README.md           - Setup and run instructions

```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://studyai-tau.vercel.app
Login Credentials (Demo)	Email: mythri@test.com / Password:1234
Platform / Hosting Provider	[Frontend: Vercel / Backend: Render
Repository Link	https://github.com/MythriSarla/studyai
Demo Video Link	https://studyai-tau.vercel.app

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Step 1: Clone the repository

```
git clone https://github.com/MythriSarla/studyai.git
```

Step 2: Setup Backend

```
cd studyai/backend
```

```
python -m venv ven
```

```
source venv/bin/activate
```

```
pip install -r requirements.txt
```

Step 3: Configure environment

Create .env file in backend/ with:

```
JWT_SECRET_KEY=your_secret_key
```

```
GROQ_API_KEY=your_groq_api_key
```

Add firebase-service-account.json to backend/app/config/

Step 4: Run Backend

```
python run.py
```

Backend runs at <http://localhost:5001>

Step 5: Setup Frontend

```
cd ../frontend
```

```
npm install
```

Step 6: Run Frontend. npm run dev

Open browser at <http://localhost:5173>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI generation takes 15-20 seconds for large files	Loading indicator shown to user during processing
2	Firebase Storage not integrated (files stored locally)	Files saved to backend uploads folder, planned for future
3	Free tier Render backend sleeps after 15 mins of inactivity	First request may take 30 seconds to wake up the server
